

PRINTING E.C.N. REPORTS

Browse the database to that ECN# you intent to create a report. Click-on the REPORT command button (ECN main form toolbar). A Report filter/selector form appears on the screen. The ECN report content can be selected by setting to true those areas of interest. Depending on the size of the information stored for a given ECN# there will be two or more report pages.

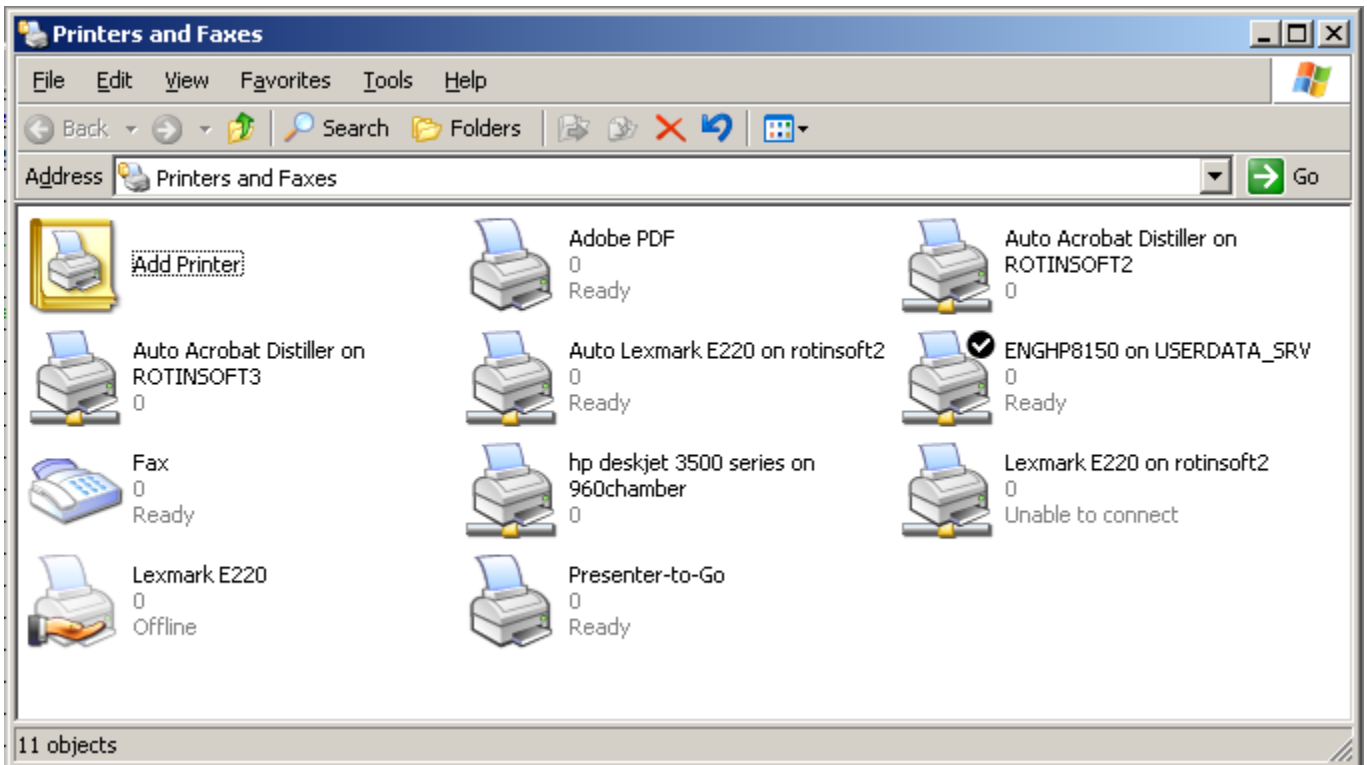

In this sample the user decides to create a MSAccess type of report, the check-box at the bottom being unchecked.

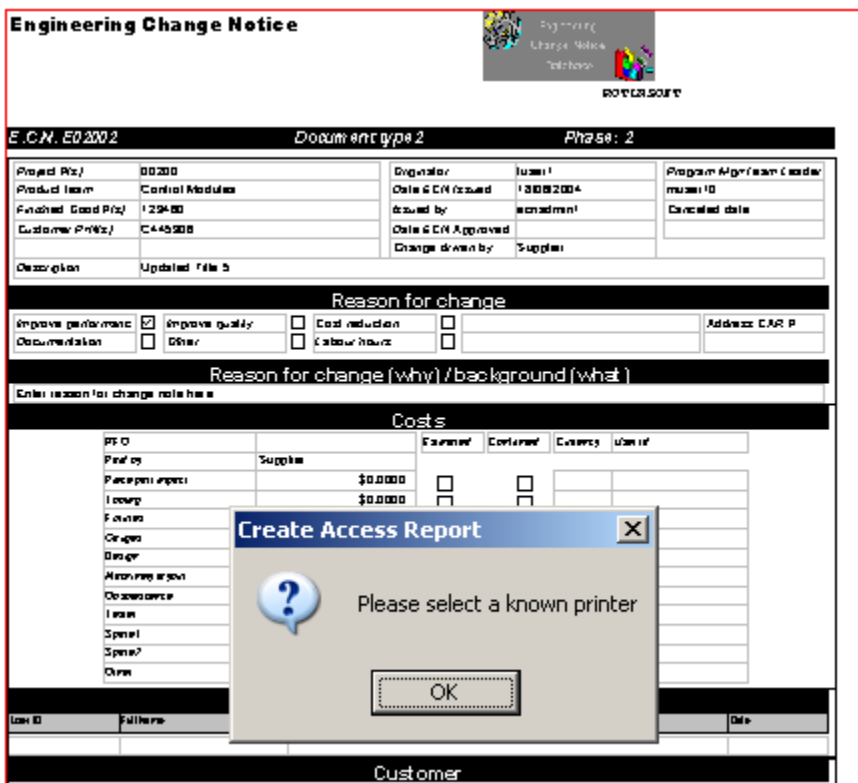

Its always a good idea to check the Printers button and to verify that the desired printer was set as default printer in Print Manager.

Click-on the Preview button to start the printing process.

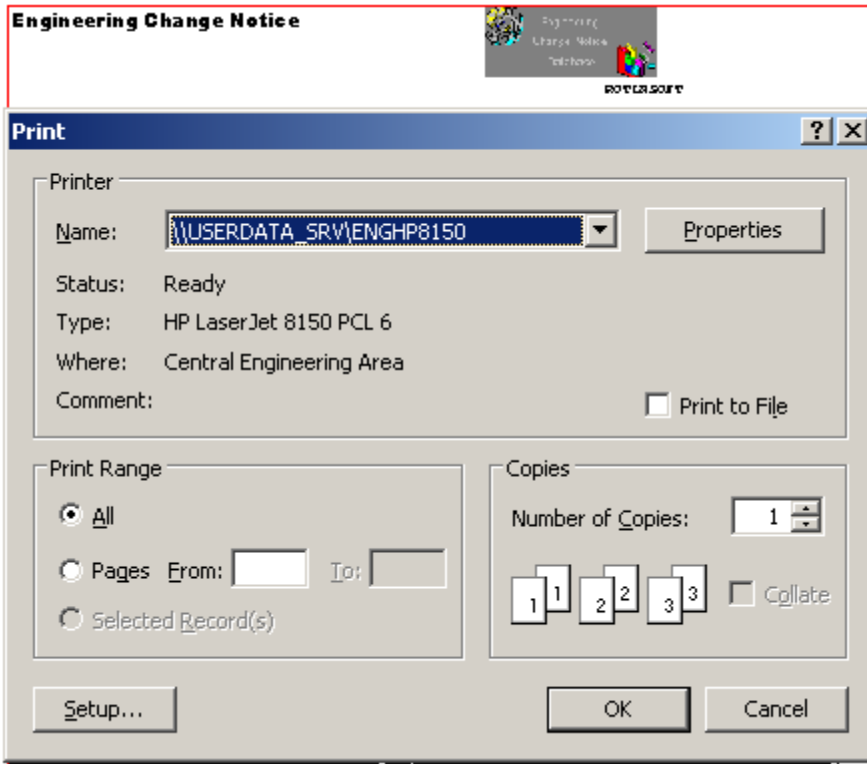

In this sample the default printer is marked with a "V". The user can change the default printer but this not means that he cannot print the report to another printer as long as the printer really exists.

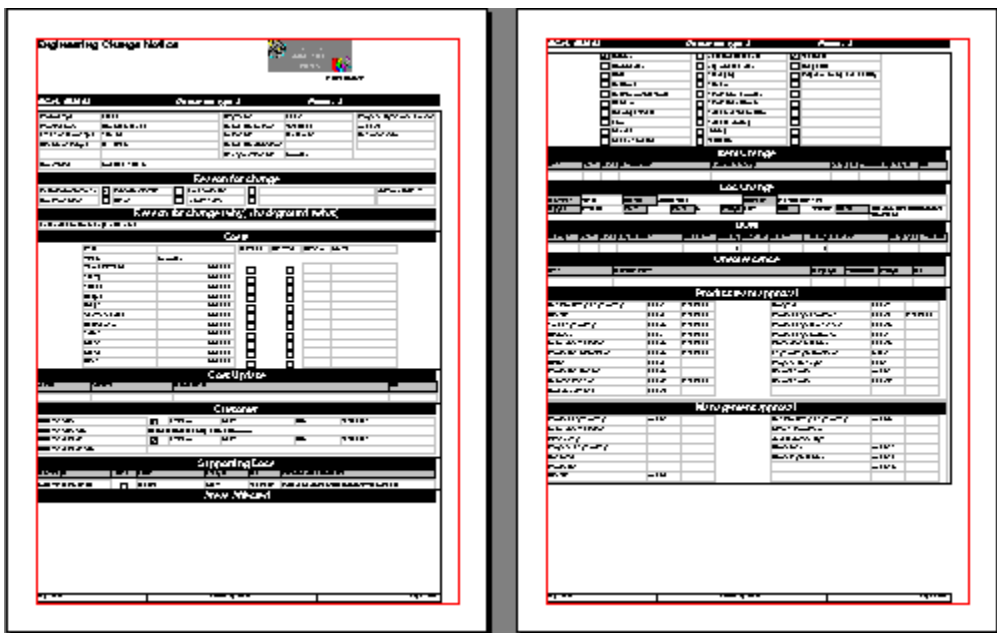

After pressing the Preview button the actual report will be shown on the screen. The user is invited to select the printer where the report should be sent.

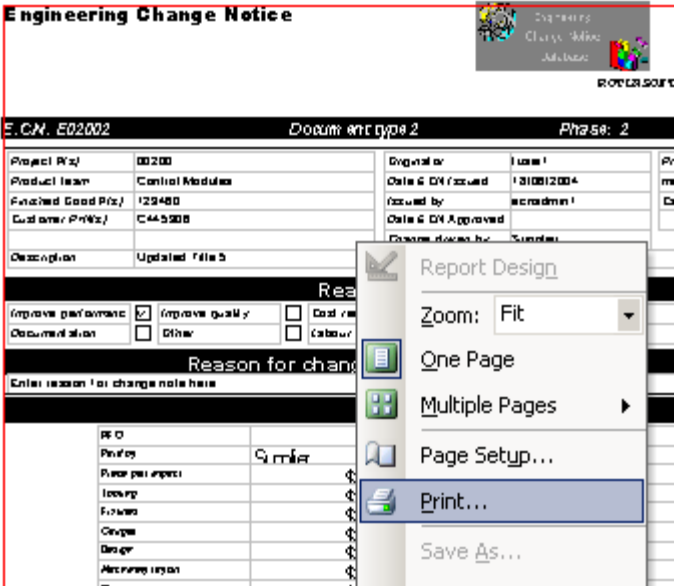

In this sample the user decides to use the default printer and clicks-on the OK command button. At this stage you can review printer related settings. However, the application is delivered with the correct settings for paper type and orientation.

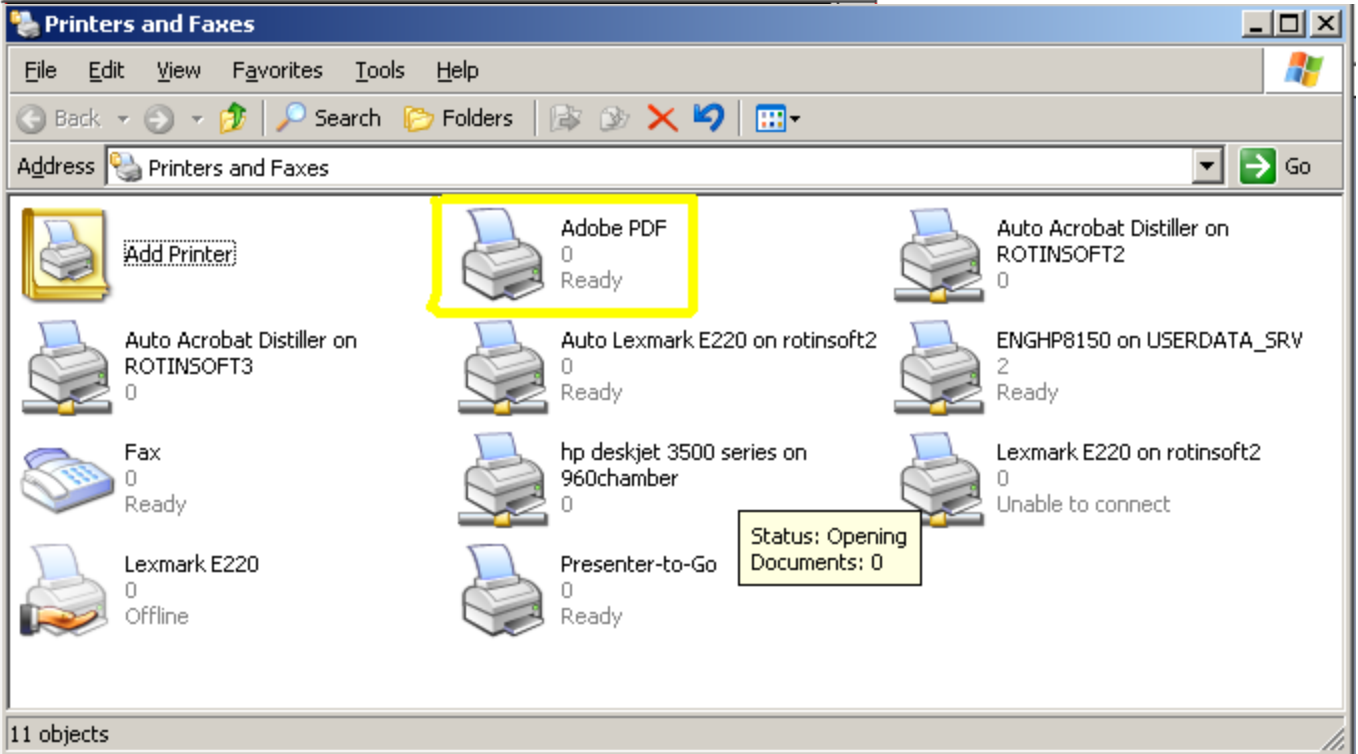

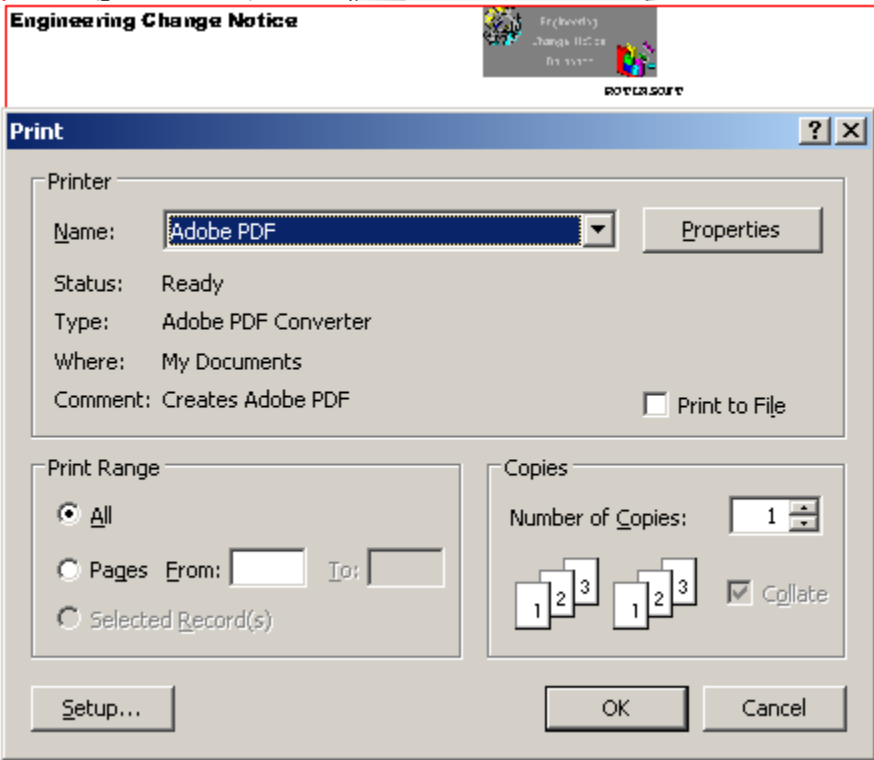

The report is printed by the selected printer and a preview copy remains available on the screen. Please note that using the right-click on the previewed the user can select to view multiple or single pages, to do a page setup, to print, to send to, to export... The recommended method is to let the application handle all these settings and options. A series of timed messages will instruct the user what to do in case of report printing failure.

The application can take print the report as a PDF file in various modes. One option depends on the existence of the Acrobat PDF Writer version 4.0. If this driver is not installed in your system it will be shown in the Report filter/selector form at the bottom.

In a system with Adobe Acrobat 6.0 Professional and Adobe Distiller 6.0 installed the user can right-click on the previewed report and to select Print. Then he must select Adobe PDF as printer and to click-on the OK button. The report will be automatically saved as a PDF file.

The Post Script file is always saved in C:\Acc2k\ECN2k\ECN2KA_ps folder.

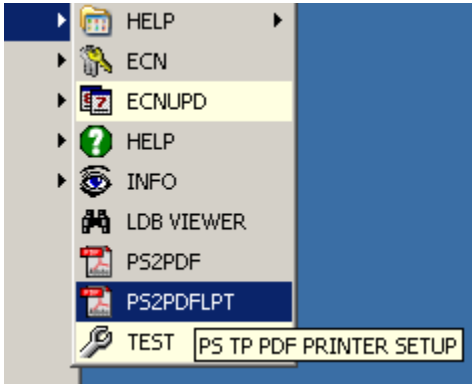

The **ECN report** can be emailed as **PDF** file. If you have installed **ACROBAT PDFWriter 4.0/5.0** you can select it as PDF maker.

Everyone can use as PDF maker the **ECN built-in PS2PDF printer** (PostScript to PDF). Use this **PS2PDF** printer to create PS files from any other application (WORD, EXCEL,...). Such a **PS** file can be converted to PDF using a shortcut to an executable installed in this new version of ECN. Use the **PS2PDFLPT** shortcut to install the **PS2PDF** printer. The application will attempt to install automatically this printer first time you print a report to **PS2PDF** printer checked in Type of Report Selector.

If the application's attempt to solve the PS2PDF conversion fails the user is instructed via messages on what might be incorrect configured. If such a problem occurs the user can click-on the Open PS command button to find he expected PS file and then to click-on the next button to execute the conversion to PDF.

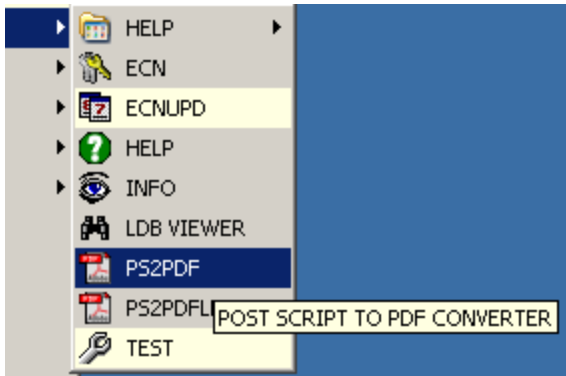

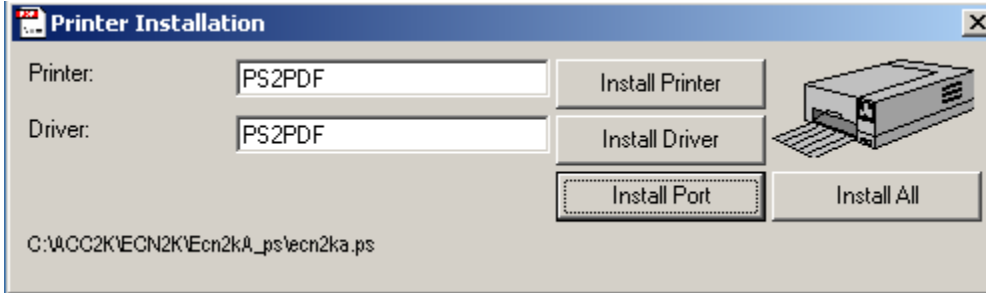

Always make sure that the PS2PDF printer was successfully installed.

Another way to install the PS2PDF printer is to click-on the PS2PDFLPT from ECN menu.

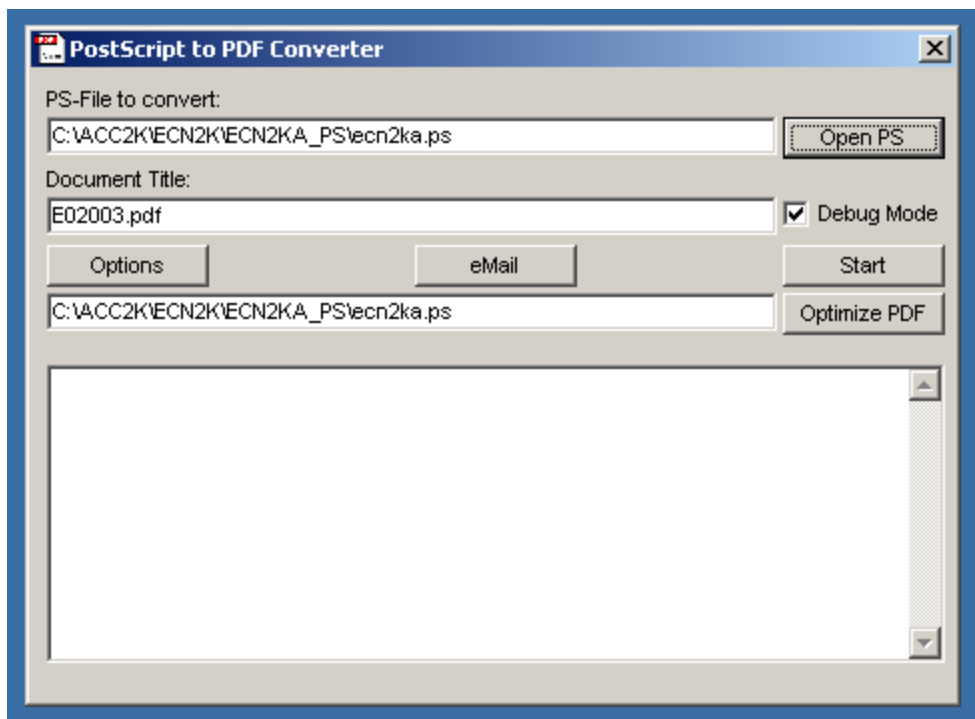

Click-on Install All button and monitor the messages.

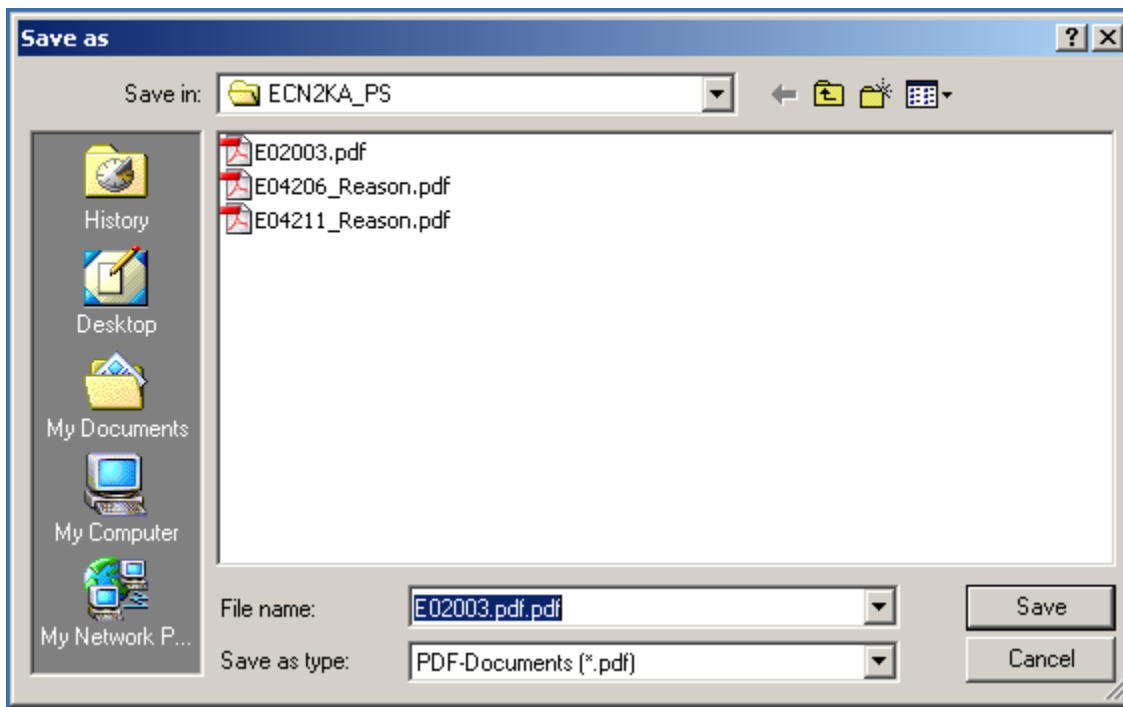

In any application that detects PS2PDF as printer the user can create PDFs via the default ECN2KA post script file.

Print your pages to PS2PDF printer to create automatically the Post Script File.

Open the PS2PDF utility, Click-on Open PS button to find the file and then click-on the Start command.

The error message below might appear on those systems having installed Adobe Acrobat Professional 6.0 when the user attempts to install the PS2PDF driver. In such a scenario the solution is to right-click on the report preview and to print to Adobe PDF printer.
